

Name of student to review my work:

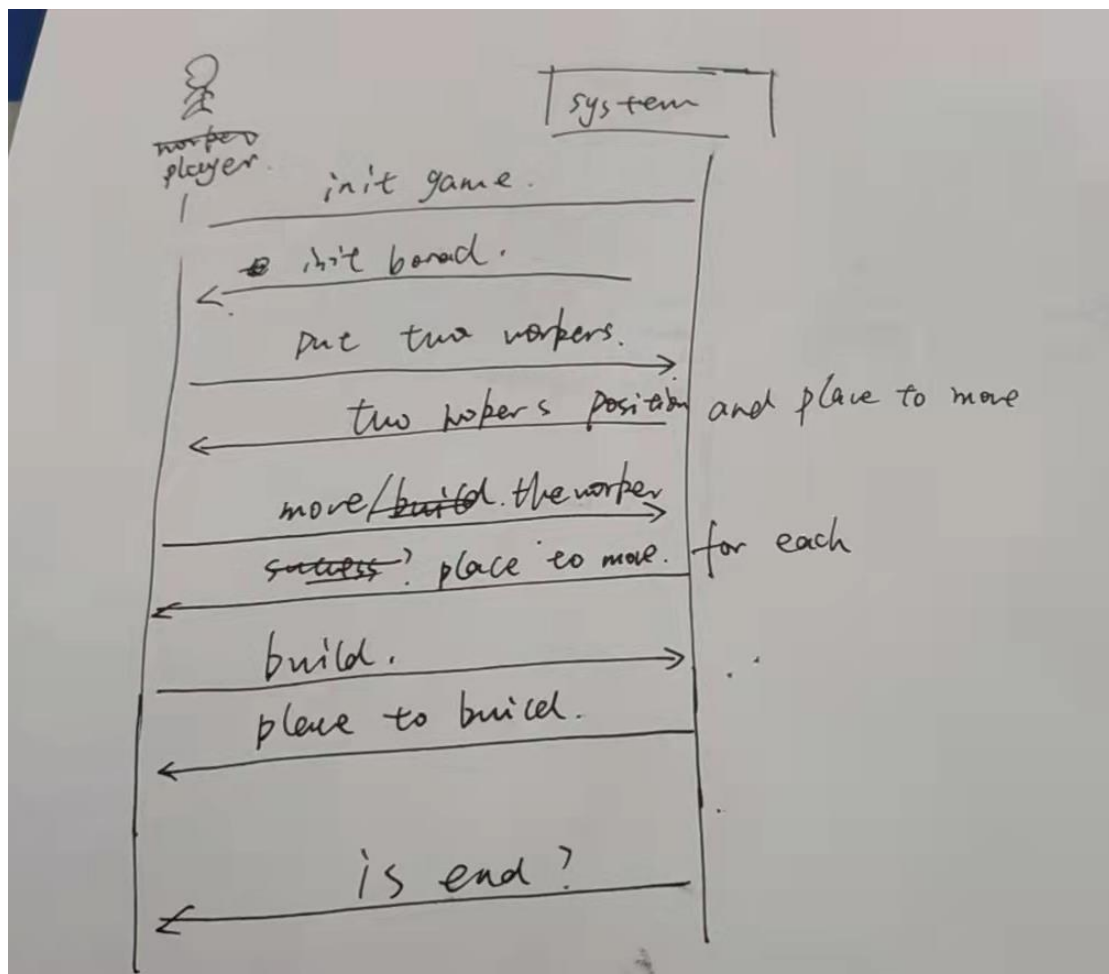

1. Yutian Wang
2. Yihang Liu

Previous model and system sequence before received feedback

Domain model:

system sequence:

3. The feed back is mainly on two:
 - a) The domain model should have a class to interact with player. So I add UI class in the domain model.
 - b) The place to build/move in sequence model is not clear. That is all the possible grid of a worker can go/move. Every action begin the board will give this information to UI to help player determine the action.
